

# Sustainability Statement

At **Drivin**, we are committed to sustainability and social responsibility, recognizing that our actions impact not only our clients and collaborators but also the environment and society as a whole. We adopt a comprehensive approach to sustainability, integrating practices that promote efficiency, innovation, and the reduction of environmental impact in every aspect of our business.

## Contribution to the industry:

The logistics solution we offer is designed to contribute to a more sustainable future, minimizing the environmental impact of operations and reducing the carbon footprint. Through optimized management, we help reduce unnecessary vehicle use and shorten travel distances, promoting more responsible and efficient transportation.

To expand our contribution to sustainability, we have developed an inclusive approach for large, medium, and small businesses, ensuring that all of them can access tools that promote sustainable practices, making their implementation simple and effective.

Furthermore, as part of our long-term commitment, we drive initiatives to enhance the human capital involved in logistics through the knowledge and use of these solutions, promoting greater environmental responsibility and contributing to a positive global impact.

## Commitment to Energy Efficiency and Emission Reduction

All our services are hosted on public clouds that feature infrastructure optimized for energy efficiency, committing to the use of renewable energy and reducing their carbon footprint, which allows us to minimize the environmental impact of our operations.

We are a company that primarily operates remotely in over 10 countries, reducing unnecessary travel, which positively contributes to the environment and improves the quality of life for our collaborators by offering them more time for their personal lives.

## Social Responsibility and Transparency

• **Compliance and Governance:** Our ISO 27001 certification not only guarantees information security but also strengthens our commitment to transparency and ethics in all our operations.

• **Positive Social Impact:** We support community initiatives and sustainability projects aimed at improving the well-being of the communities where we operate. Additionally, we promote education and awareness about sustainability among our collaborators, partners, and clients.

## Ongoing Commitment

We remain steadfast in our mission to be a responsible and sustainable company. As we move forward, we will continue to evaluate and improve our practices to ensure that our impact on the planet and society is positive and lasting.

At Drivin, we believe that technology, efficiency, and process optimization can be a driving force for a more sustainable future, and we are dedicated to leading by example, adopting the best sustainability practices for the benefit of present and future generations.
